

The face and its architecture

In this book you will find a bold juxtaposition between a static and lifeless world such as that of architecture and the animated and dynamic world like the human face. As you continue with the reading, you will realize that this juxtaposition is only bold on the surface. The truth is that there is a robust red line that connects them. With the 3D pretext, you will find that architecture and face are connected by the passion for beauty, the study of art and the expression of the soul. You will be transported gently into this unique universe. Architects will feel a little more like experts of the human face, while beauty professionals will understand more in depth the meaning of architecture - all through an amazing dialectic diffusion. Jessica Ciaramelletti was born in Napoli in 1973. Architect, makeup artist, communication expert, has been working within the beauty, teaching, editorial and projectual fields. After inventing the Eyebrow Tracer she founded Malamente, an unconventional communication agency. The face and its architecture is her debut as essayist.
