. Pick whichever version you want**

Why a green building project prefers brownfield? Why nowadays more projects are putting parking underground? What is Heat Island? What about Light Pollution? What are benefits of green roof? Why contractors care about ESC plan?..... This small book covers four essential aspects of green site planning: site selection, transportation, site design and storm water management. Typical green building strategies for each part are suggested. The book also provides a LEED toolbox kit for site contractors in the end. Some practice questions are also included for those who want to know what they learned by reading this book, matching the materials in each part of the book with detailed explanation.

PLEASE READ: For those who want to pursue the LEED exam, please buy the authors big book LEED GA Guaranteed instead (463 pages). Do a simple search on Amazon.com or go to the direct link: <http://www.amazon.com/dp/B00AT2R8G8>
