

Blood Component Preparation: From Benchtop to Bedside

This convenient resource has it all. Not only the different methods for blood component preparation but also the effects that those methods have on the product itself and, thus, the blood recipient. The book addresses four major areas: overview of methods, additive solutions and containers, frequently used modifications, and updates on recent technologies and techniques. Chapters cover: Component therapy concepts. The platelet-rich plasma method. The buffy-coat method. The apheresis method. RBC additive solutions and containers. Platelet additive solutions and containers. Leukocyte reduction. Component irradiation. Components for infants. Pathogen reduction technologies. Use of automation. LEAN manufacturing. This book will be a useful reference for transfusion service physicians and those in the component preparation unit alike.
