

“Although, your health condition may impact your everyday life, do not let it define who you are.” BENLYSTA (belimumab) is used with other medications to treat people with certain types of systemic lupus erythematosus (SLE or lupus; an autoimmune disease in which the immune system attacks healthy parts of the body such as joints, skin, blood vessels, and organs). Belimumab is in a class of medications called monoclonal antibodies. It works by blocking the activity of a certain protein in people with SLE. Belimumab may not work as well to treat African Americans who have SLE. This medicine is to be given only by or under the immediate supervision of your doctor. Thanks and may you have a good understanding about this drug—BENLYSTA (belimumab). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
