

## LOUIS PASTEUR

Louis Pasteur, 1822–1895, was a French chemist and microbiologist renowned for his discoveries of the principles of vaccination, microbial fermentation and pasteurization. He is remembered for his remarkable breakthroughs in the causes and preventions of diseases, and his discoveries have saved countless lives ever since. He reduced mortality from puerperal fever, and created the first vaccines for rabies and anthrax. His medical discoveries provided direct support for the germ theory of disease and its application in clinical medicine. He is best known to the general public for his invention of the technique of treating milk and wine to stop bacterial contamination, a process now called pasteurization. He is regarded as one of the three main founders of bacteriology, together with Ferdinand Cohn and Robert Koch, and is popularly known as the father of microbiology. This book covers the life story of this heroic scientist and provides great reading of the details and context of his important discoveries. CONTENTS I A Studious Boyhood II A Laborious And Enthusiastic Youth III On The Road To Fame IV For The National Wealth V The Spirit Of Patriotism VI The Curative Poison VII The Sovereignty Of Genius VIII Hydrophobia IX The Pasteur Institute X The Supreme Homage XI The Last Days Of A Great Man This book published in 1914 has been reformatted for the Kindle and may contain an occasional defect from the original publication or from the reformatting.
