

Roachs Introductory Clinical Pharmacology

You can prepare for your future career and success on the NCLEX with the only pharmacology textbook truly written for the LPN/LVN student, Roachs Introductory Clinical Pharmacology. This proven book will help you every step of the way to master one of the most challenging content areas in the LPN/LVN curriculum. Organized by body system, the book provides a clear, concise introduction to pharmacology, focusing on basic principles and the nurses responsibility in drug administration. You can focus your reading and enhance your mastery of course concepts through chapter-opening Learning Objectives, Key Terms, and Drug Class lists that identify potential errors and safety concerns. You can learn drug contraindications, precautions, and interactions through The Nursing Process framework that presents care of the patient as it relates to the drug and drug regimen, as well as Checklists of Relevant Nursing Diagnoses. You can master important patient care concepts with Pharmacology in Practice case studies that focus on assessment, administration, or teaching issues that have an impact on a real-life patient. Chapter-ending Think Critically questions return to the patient in the case study and ask you to explore options and make clinical judgments related to the administration of drugs. You can get a sense of real world practice through Patient Case Study scenarios threaded through each chapter that offer a simulation-focus. Quickly identify urgent nursing actions that may be required when managing a patient receiving a specific drug or drug category through Nursing Alerts. You can prepare for NCLEX success with Build Your Knowledge (information and fact-based warm-up questions), Apply Your Knowledge (questions keyed to the actual NCLEX-PN test plan), and Alternate Format Questions. You can access vital tools for your future career, including Drug

Interaction Tables that provides at-a-glance information about the likelihood of a patient problem when multiple drugs are given and Summary Drug Tables that list drugs from the classes discussed in each chapter, including names, uses, frequent adverse reactions, and general dosing information. You can meet the needs of specific populations at risk or needing specific drug administration considerations through practical Lifespan Considerations boxes. You can expand your knowledge through Herbal Considerations boxes that provide information on herbs and complementary and alternative remedies that may be used by patients under their care. You can prepare for situations that may arise during drug therapy for patients with chronic illnesses, such as diabetes, hypertension, or epilepsy, including issues of polypharmacy through Chronic Care Considerations. You can master each chapters key concepts and skills through Know Your Drugs (matching questions), Calculate Medication Dosages (dosage calculation questions), and Prepare for NCLEX (NCLEX-style questions), at the end of each drug chapter.
