

Healthy Medicine: A Guide to the Emergence of Sensible, Comprehensive Care

We need changes in our attitudes, our understanding of illness, our acceptance of non-allopathic practitioners, the economics of how we pay for health care, and our entire professional medical-legal system in which medical boards often act within the law to protect and defend the guild of conventional medicine under the guise of scientific proof.... I present a template that combines economics, psychology, medicine, physiology, and mythology. It can serve as support and guidance for making the changes necessary for a new model of medicine in the twenty-first century. Dr. Robert J. Zieve presents a new paradigm for health care that shows us how to go beyond the limitations and severe deficiencies of our current sickness care system. It embraces and synthesizes the emerging models of integrative medicine, energy medicine, and energy psychology into an effective and affordable approach to healing for everyone. This guide is for both those who wish to provide a more complete form of health care for their patients and also for those individuals who are prepared to make the necessary changes in daily life in order to initiate or maintain a movement toward healing. This includes understanding the daily disciplines of a healing process, the deeper psychological processes of illness, and the creative arts in their therapeutic roles.
