

Environmental Cancer-A Political Disease?

In this provocative book, S. Robert Lichter and Stanley Rothman examine the controversies surrounding environmental cancer and place them in historical perspective. Then, drawing on surveys of cancer researchers and environmental activists, they reveal that there are sharp differences between the two groups viewpoints on environmental cancer. Despite these differences, a further comparison - between the views of the two groups and the content of television and newspaper accounts over a two-decade period - shows that press reports most frequently cite the views of environmental activists as if they were the views of the scientific community. These findings cast doubt on the objectivity of the news media and environmental activists. And, the authors conclude, misplaced fears about the risks of environmental cancer have seriously distorted public policy and priorities.
