

Evidence-Based Management of Low Back Pain - Elsevier eBook on VitalSource (Retail Access Card), 1e

A multidisciplinary approach covers treatments from manual therapies to medical interventions to surgery, and many others in between. An interdisciplinary approach enables health care providers to work together. A logical, easy-to-follow organization covers information by intervention type, from least invasive to most invasive. Integration of interventions provides information in a clinically useful way, so it's easier to consider more than one type of treatment or intervention for low back pain, and easier to see which methods should be tried first. 155 illustrations include x-rays, photos, and drawings. Tables and boxes summarize key information. Evidence-based content allows you to make clinical decisions based on the ranking the best available scientific studies from strongest to weakest. Patient history and examination chapters help in assessing the patient's condition and in ruling out serious pathology before making decisions about specific interventions. Experienced editors and contributors are proven authors, researchers, and teachers, and practitioners, well known in the areas of orthopedics, pain management, chiropractic, physical therapy, and behavioral medicine as well as complementary and alternative medicine; the book's contributors include some of the leading clinical and research experts in the field of low back pain. Coverage based on The Spine Journal special issue on low back pain ensures that topics are relevant and up to date. A systematic review of interventions for low back pain includes these categories: patient education, exercise and rehabilitation, medications, manual therapy, physical modalities, complementary and alternative medicine, behavioral modification, injections, minimally invasive procedures, and surgery. Surgical interventions include decompression, fusion, disc arthroplasty, and dynamic stabilization. Additional

coverage includes patient education and multidisciplinary rehabilitation.
