

Atripla: Treats Human Immunodeficiency Virus (HIV) infection and may decrease the chance of developing Acquired Immunodeficiency Syndrome (AIDS) and ... such as serious infections or cancer

Atripla: Treats Human Immunodeficiency Virus (HIV) infection and may decrease the chance of developing Acquired Immunodeficiency Syndrome (AIDS) and ... such as serious infections or cancer

Although, your health condition may impact your everyday life, do not let it define who you are. ATRIPLA is used along with other medications to treat human immunodeficiency virus (HIV) infection. ATRIPLA is in a class of medications called nucleoside reverse transcriptase inhibitors (NRTIs). It works by decreasing the amount of HIV in the blood. Although ATRIPLA does not cure HIV, it may decrease your chance of developing acquired immunodeficiency syndrome (AIDS) and HIV-related illnesses such as serious infections or cancer. Taking these medications along with practicing safer sex and making other life-style changes may decrease the risk of transmitting (spreading) the HIV virus to other people. Thanks and may you have a good understanding about this drug ATRIPLA. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
