

# Green Building Design 101: A Basic Guide to Building and Remodeling Sustainably

Green building is the future of the construction industry. This book provides an introduction to green building for those not familiar with construction or building design. It breaks green building strategies and techniques into six general categories: site, water, energy, materials, indoor air quality, and construction procedures. A glossary is provided at the beginning of the book to help those new to the topic. Readers will learn about ways to green their own buildings, as well as what to consider when designing and building new green buildings.
