

Handbook of Natural Toxins: Bacterial Toxins: 4

This volume describes the structure and function of bacterial toxins and presents a comprehensive review of virulence factors, providing recent information concerning cell physiology and biochemistry, as well as new toxin tools for experimental studies and clinical therapy. A wide variety of toxic proteins, including the toxins that cause diphtheria, cholera, pertussis, shigellosis, tetanus, botulism and anthrax, are discussed. The work is aimed at microbiologists, biochemists, endocrinologists, toxicologists, infectious disease specialists, pathologists, public health officials, and upper-level undergraduate and graduate students in these disciplines.
