

Immunology : Battling the Bugs (The Nobel Prize Science Collection)

This program follows winners of the Nobel Prize in medicine as they unravel the mysteries of the immune system. See how scientific detective Alexander Fleming first discovered penicillin and how this powerful antibiotic was isolated by researchers Walter Florey and Ernst Chain. Viewers will watch other laureates as they uncover the mechanism through which the viruses attack cells, discover mysterious disease-inducing proteins called prions and study the behavior of our white blood cells as they multiply and destroy invading bacteria.
