

Self-Assessment Color Review of Ornamental Fish (Sac)

This self-assessment color review offers more than 250 clinical case studies covering all important medical and surgical conditions of ornamental fish. Cases appear in random order and address different levels of expertise. Two hundred fifty color and black-and-white illustrations support the case studies. Rounding out the manual are questions and answers on fish anatomy, physiology, husbandry, and identification. This comprehensive coverage makes Self-Assessment Color Review of Ornamental Fish a primary source of reference for veterinary practitioners, professional aquarists, hobbyists, and students.
