

# Pancreatic Disease: Protocols and Clinical Research

Clem Imrie and Colin Johnson This book stems from an unusual meeting held in The Royal College of Physicians and Surgeons of Glasgow in March 2007. Enthusiastic doctors in the diagnosis and treatment of pancreatic diseases were arranged in small groups to discuss specific unsolved/partially clinical problems and suggest the way forward. In some instances, the recommendations were initial improved longitudinal studies, while in others better double-blind randomized studies. The recommendations were then presented on the second day before the total 40 plus participants who added their input. Finally, the mechanics of initiating the proposals were arranged. The editors are most thankful to the authors from the meeting, who have assembled the various contributions to this stimulating volume. xi

Part I Potential Trials in Acute Pancreatitis  
Chapter 1 Acute Pancreatitis in Intensive Care  
John Kinsella, Barry Clements, Euan Dickson, Thierry Dugernier, and Martin Hughes

1.1 Introduction Severe acute pancreatitis is associated with the development of the systemic inflammatory response syndrome (SIRS). Hypoxemia is a hallmark of acute pancreatitis and respiratory failure is the most common single organ failure in this disease. In the most severely ill patients multi-organ dysfunction syndrome (MODS) and multi-organ failure (MOF) occur. Intensive care with multiple organ support is necessary.
