

The world is on the threshold of a great new industrial revolution, a 1 scientific-industrial revolution. Recombinant DNA technology and hybridoma technology (monoclonal antibodies) have already provided unique investment opportunities for venture capitalists. Hence published reports of biomedical research are no longer restricted to scientific journals, but now appear regularly not only in weekly news- 2 magazines like Time and U. S. News & World Report,³ but also in the financial sections of The New York Times,⁴ The Wall Street Journal,⁵ 6 8 Business Week, Fortune,⁷ and The Economist, as well as in such stock 9 market advisory publications as New Issues and Inc. (The Magazine for Growing Companies). 10 These publications now appear to be as important to biomedical scientists in keeping abreast of new scientific developments in biotechnology as is Current Contents. (The costs of health- cost provision and of fundamental biomedical research are now also being followed by such media.) Conversely, Wall Street financial brokers increasingly no longer confine their reading to economic journals but are also perusing Nature,¹¹ Science,¹² and Science N 13 for information on both fiscal and scientific advances in these areas. It is obvious that the information explosion in biotechnology is crossing traditional boundaries (e. g. , ref. 14). This volume is the second of several that are intended to inform both the biomedical community and interested intelligent laymen of the political and economic implications of biomedical research.

Drugs Facts And Comparisons, Guidelines for Reporting Health Research: A Users Manual, Coping With Prednisone and Other Cortisone-Related Medicines : It May Work Miracles, but How Do You Handle the Side Effects?, Spiritual Care in Nursing Practice, The Orthodontic Patient: Treatment and Biomechanics, Treatment of the Seriously Ill Psychiatric Patient, CD-ROM Practice Test for Wojciechowskis Entry Level Exam Review for Respiratory Care, 3rd, Fundamentals of Nursing,
