

Structure of Small Molecules (Principle of Modern Chemistry)

Open Programs for Associative Learning is an interactive system using computer technology and hypermedia principles to present an alternative approach to learning and teaching. OPAL modules provide tools such as, intermodular links, interactive animations, sensitive zones and words, and navigation tools. This module covers the structure, development and mechanisms of function of various immune cell types. It includes immunoglobulin structure, action, classification and genetics; the MHC complex; the system of complement; cell-mediated lysis and cytotoxicity; and T cell activation. The software is compatible with Mackintosh and MS-Windows operating systems. It requires 2 Mb Ram and 2Mb harddisk storage.
