

Specifications in detail

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 Excerpt: ... Leeds make a form of slow combustion stove with a raised hearth in front, the air being supplied through a small flue under the hearth. Dog stoves are supplied with air from all round. Portable stoves, gas, oil and charcoal stoves are generally fixed loose into or near a fireplace opening. In the case of portable and gas stoves, a flue pipe should be connected into the ordinary chimney flue. Register and slow combustion stoves may have tile or brick cheeks round the fronts, either attached and forming part of the stoves themselves, or else fixed round separately afterwards. Dog stoves are grates or baskets to contain the fuel, and are placed quite loose in the fireplace openings. The back and cheeks of the fireplace openings may be tiled or bricked round. Owing to the large amount of open space around dog stoves, they are liable to smoke, the flue should therefore be of some height, and gathered over quickly at the base, both from the sides and the front, and finished with an iron register plate immediately over the grate. Open hob ranges usually have the cheeks and backs above the ranges formed in iron, or firebrick. For the same reason as with dog stoves, they also are very liable to smoke, and the flues may be treated in a similar manner. Sometimes an iron blower is fixed in front to assist the draught. A very simple form of grate is made with the cheeks and back lined round in glazed (or other fire) brick, and to which bars are fixed, forming the grate; the flue is left quite open above the grate, without a register. In ordinary size living rooms having register or slow combustion stoves, the fireplace opening, between the brickwork, may be made 2 ft. 6 in. to 3 ft. wide by 14 in. deep. In large

rooms, from 3 ft. to 3 ft. 6 in. wide by 14 in. deep. In ...
