

CT-Differential Diagnosis

The modality of CT-Scan has made a significant impact in imaging and is an indispensable technique in diagnostic field. This book informs about the acquisition of isotropic volumetric data to reconstruct images to obtain diagnostic information. The use of improved techniques of imaging and the findings ascertained on that provide a list of differential diagnosis. This book covers various disease conditions giving similar imaging findings on CT. Includes most of the disease processes/conditions of every organ system which can be diagnosed on CT. Illustrations are also provided to show visual impact of the image findings. Presents descriptions in a vivid manner so that with the help of tables various clinical conditions could be segregated by students, radiologists/clinicians and paramedics in ICUs.

1. Brain, *Intracranial Calcification, *Differential Diagnosis of Brain Tumors, *Nontumoral Brain Lesions, *Ventricular Lesions, *Miscellaneous Lesions of the Brain ,
2. Spinal cord, *Spinal Cord Lesions, *Lesions Associated with Spinal Canal Stenosis,
3. Ear and Temporal Bone,
4. Orbital Lesions,
5. Nasal or Paranasal Sinus Lesions,
6. Neck, *Pharyngeal/parapharyngeal Lesions, *Neck Space Lesions, *Parotid Lesions, *Lesions of the Oral Cavity, *Laryngeal or Visceral Space, *Thyroid and Parathyroid Gland Lesions, *Lymph Nodes in the Neck,
7. Chest, *Pulmonary Nodular and Cavitating Lesions, *Interstitial Lung Diseases , *Cystic Pulmonary Diseases, *Mediastinal Masses, *Classification of Regional Intrathoracic, *Lymph Nodes, *Lesion of the Tracheobronchial Tree, *Pleural Lesions,
8. Abdomen, *Abdominal Wall Lesions, *Hernia through the Abdominal Wall, *Hepatobiliary Lesions, *Splenic and Pancreatic Lesions, *Gastrointestinal Lesions, *Peritoneal/Mesenteric/Omental Lesions, *Retroperitoneal Lesions,

*Adrenal Lesions, *Genitourinary Lesions,
9. Musculoskeletal System, *Bony Lesions, *Rib Lesions, *Skull and Jaw Lesions, *Bony Spinal Lesions, *Arthritis, *Soft Tissue Lesions.
