

## Transgression: Towards an expanded field of architecture (Critiques: Critical Studies in Architectural Humanities)

Transgression means to cross over: borders, disciplines, practices, professions, and legislation. This book explores how the transgression of boundaries produces new forms of architecture, education, built environments, and praxis. Based on material from the 10th International Conference of the AHRA, this volume presents contributions from academics, practicing architects and artists/activists from around the world to provide perspectives on emerging and transgressive architecture. Divided into four key themes boundaries, violations, place and art practice - it explores global processes, transformative praxis and emerging trends in architectural production, examining alternative and radical ways of practicing architecture and reimagining the profession. The wide range of international contributors are drawn from subject areas such as architecture, cultural geography, urban studies, sociology, fine art, film-making, photography, and environmentalism, and feature examples from regions such as the United States, Europe and Asia. At the forefront of exploring inter-disciplinary and trans-disciplinary research and practice, Transgression will be key reading for students, researchers and professionals with an interest in the changing nature of architectural and spatial disciplines.
