

HIV/AIDS and Medical Cannabis

How and why medical marijuana (cannabis) can treat various medical conditions is the subject of this series of publications. These guides were created by Americans for Safe Access (ASA), a non-profit advocacy organization, to help individuals who are considering cannabis treatments to better educate themselves, their families and their physicians with the latest research about how medical cannabis interacts with their bodies and the potential relief that it can bring in treating their condition. ASA has been developing information resources about medical marijuana (cannabis) for patients, their families, doctors, and elected officials for over a decade. All proceeds raised from the sale of publications in this series go to promote the work of Americans for Safe Access. Learn more at AmericansForSafeAccess.org.
