

The Random-dot Stereogram (RDS) is a state-of-the-art method of stereopsis tests. To broadcast RDS global stereopsis test and to research stereo-blindness will be an active area of ophthalmology in the future. This new test chart is recommended for: examining and diagnosing various strabismus, amblyopia, anisometropia, high and moderate hyperopia, high and moderate astigmatism; evaluating the postoperative effects of cataract extraction, intraocular lens implantation and excimer laser corneal surgery; medical optometry; choosing pilots, drivers, and other personnel for special work; basic research on binocular stereopsis perception; and, teaching and training in the specialties of medicine, biology and psychology.
